

SRI SATHYA SAI ENERGY EFFICIENCY UNIT (EEU)

***AUM SAI RAM
LOVE ALL, SERVE ALL***

1. Introduction

With the recent increase in the energy crisis awareness across the world, it has become of greater necessity for devotees to adopt an attitude of change to reduce the crisis that may lead to our own downfall. The sooner we start “becoming the changes we want to see in the world” the greater will be the effects (both positive and cascading) on future generations.

2. Energy Efficiency (EE) – Definition

To **physically** (via electricity and the elements namely air and water), **mentally** (via our thoughts) and **spiritually** (via the divine energy) cut down on our unneeded desires.

DO YOU HAVE ENOUGH?

3. Vision

To put into practice a Ceiling On Desires (COD) programme and utilise the savings generated for the selfless service of mankind. To enable every member of the Sri Sathya Sai Seva Organisation and ultimately our entire country to share in Sathya Sai Love Energy and to become energy efficient individuals.

4. Mission

To provide every South African with an opportunity to actively participate in the energy efficiency programme. To provide the necessary tools required to become energy efficient citizens.

5. Issues...

What are the problems of today?

- Global warming, climate change
- Rapid use & abuse of Earth's natural resources, growing economy
- Destruction of the natural environment

Why?

- Materialistic
- Wasteful
- Selfishness
- Ungrateful

This is the year 2035

I have just turned 50, but my appearance is of somebody aged 85.

I suffer from serious kidney problems, because I do not drink enough water.

I'm afraid I do not have much time left to live.

I'm one of the oldest people on this earth.

**I remember there were
“SAVE WATER”
warnings on posters, radio
and TV, but nobody paid
attention.**

**We thought that water
was to last forever.**

**Now, all the rivers, lakes,
dams and underground
water beds are either dry or
polluted.**

Before, the recommended quantity of water to drink for an adult was 8 glasses a day. Nowadays, I am only allowed half a glass.

Ris Slides

Water is a treasure, more precious than gold and diamonds.

We were warned to look after the environment, but nobody cared.

I cannot help feeling guilty, because I belong to the generation who contributed to the destruction of the environment or simply did not take into account all the warning signs

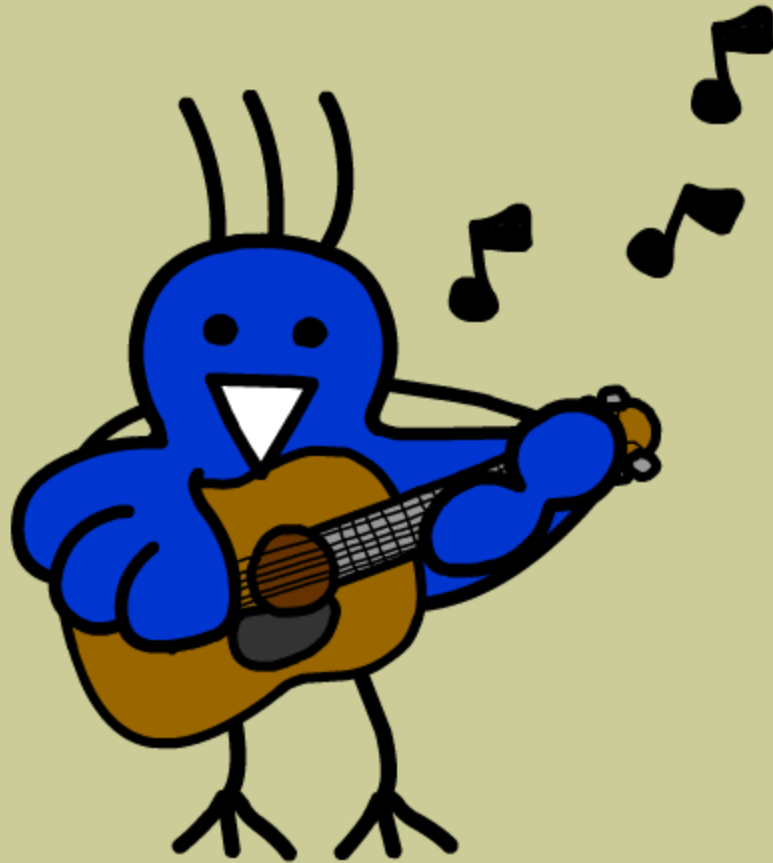

Now our children pay a very high price!

**How I would like to go back and make my family
understand...**

**...that we still had time to save our Mother...
Earth.**

The winds of change has started

ACT NOW ☺

before it's too late...

Going Green

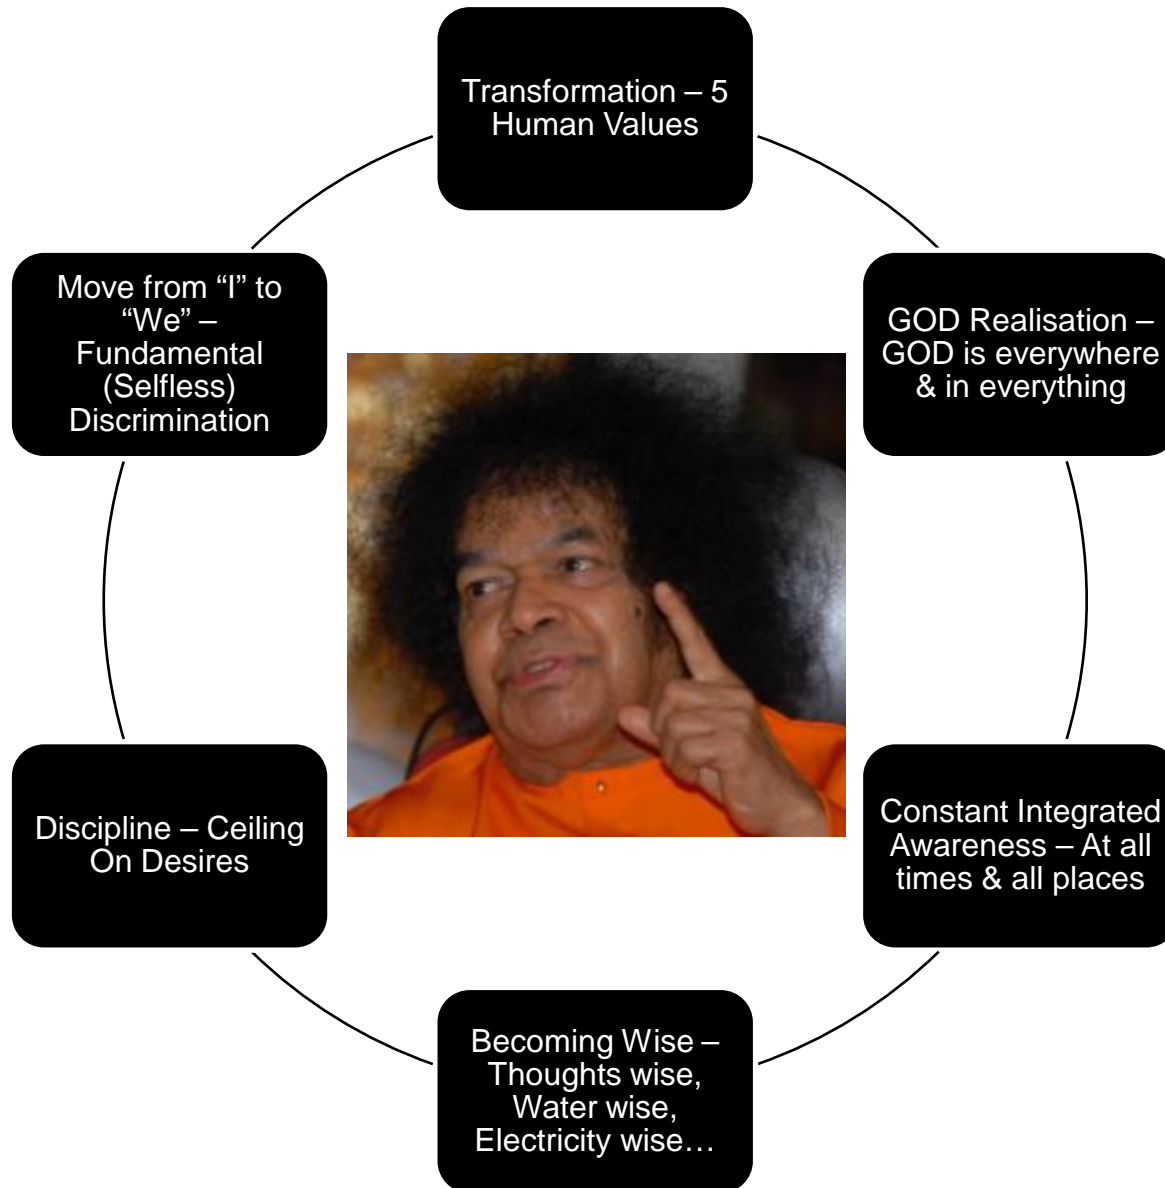

- Switch off your standby electrical appliances (TV, computers & home theatres) when you're not using them & unplug your cell phone charger
- Turn down the thermostat on your refrigerator and don't open the door unnecessarily
- To defrost food - leave it out of the fridge for a few hours instead of using the microwave
- Insulate your home to keep warm during winter and cool in summer - thereby reducing the need for fans and heaters & dress appropriately

No matter which one you choose when you think of when **Going Green**

Ditching bottled water keeps **Mother Earth** and your wallet **Green**.
